

TAM MEETS WITH NAVY OFFICIALS IN LEBANON ON POTENTIAL WORK

WHEN: 10-16 MAY

WHAT: CETAM led a 4-person team of Pier and Boat Lift Subject Matter Experts (SME's) from the Jacksonville District into Beirut, Lebanon for Site Validation and Scope Determination Meetings with Lebanese Armed Forces - Navy (LAF-N) leadership. This was done at the request of the Office of Security Cooperation - Lebanon (ODC-L) on behalf of the LAF-N.

The team to spent 6 days in Lebanon, splitting their time between the jobsite at the Port of Tripoli Naval Base conducting site assessment/validation surveys and the Beirut Naval Base where meetings were held with LAF-N leadership. These meetings also included representatives from the ODC-L and US Navy PMS 325. The Lebanese Armed Forces recognize the importance of maintaining maritime border security and their ability to monitor and patrol Lebanon's territorial waters in the Eastern Mediterranean. They currently, have no means to perform required long-term maintenance on their fleet, and the Naval Vessel Maintenance Facility at the Port of Tripoli Naval Base will enable them to maintain mission readiness of both their current and future fleet. The USACE team was grateful for the opportunity to provide assistance and will work towards providing further assistance as the project develops.
